WR35CP – GR6 COMPOSITE CLUTCH PACKS INSTALLATION NOTES

WR35CP Composite Clutch Packs are designed as a direct fit replacement for the stock GTR clutch packs offering improved performance and grip hence transferring greater torque before slip. Installation is straightforward with the transmission assembled, however we would suggest any installer consider fitting WR35CC-L upgrade clutch clips during the process.

Before installing WR35CP Composite Clutch Packs ensure that the clutch plates are soaked in the fluid being used in the transmission for up to 12 hours before installation. This will ensure correct clutch operation from the very first operation.

The clutch plates need to be installed in the correct order with the steels. Do not alter the order of friction and steel plates or clutch malfunction can occur.
